EDUCATION

- **Vellore Institute of Technology** Vellore, India
Bachelor of Technology - Electronics and Communication Engineering; CGPA: 9.51/10 2022 - present
- **Delhi Public School** Varanasi, India
12th Board Percentage: 90.6 % July, 2021
- **ST Joseph School** Sonebhadra, India
10th Board Percentage: 90.6 % May, 2019

SKILLS SUMMARY

Programming Languages	Java, C++, C, Python, JavaScript
Frontend Technologies	ReactJS, HTML, CSS, Tailwind CSS
Backend	NodeJS, ExpressJS, MongoDB, MySQL
Conceptual Skills	DSA, OOPs, Cloud Computing, Version Control
Other Tools/Technologies	AWS, Git, GitHub, Postman
Soft Skills	Problem-solving, Adaptability, Teamwork, Initiative

RELEVANT COURSES

- **Mastering Data Structures and Algorithms using C and C++** Certificate
by Abdul Bari, Udemy
- **Generative AI** Certificate
by IBM Developer Skills Network
- **Data Structures and Algorithms, AWS for Cloud Computing, Java, Python**
VIT, Vellore

PUBLICATION

- **REAL-TIME FACE RECOGNITION AND NOTIFICATION SYSTEM USING AWS CLOUD SERVICES** Submitted
ICINVENTS 2025 - Innovations in Engineering and Next-Generation Technologies for Sustainability June, 2025
Tamil Nadu, India

Collaboratively developed a scalable web application for real-time facial recognition, leveraging AWS cloud services. An efficient workflow was designed where images captured via mobile or web interfaces are uploaded to Amazon S3, triggering AWS Lambda for serverless processing with Amazon Rekognition. The system automates security alerts by delivering recognition results through Amazon SNS notifications. Additionally, AWS CloudWatch was used to store and monitor activity logs, ensuring system reliability, debugging, and performance optimization. Successful integration of multiple AWS services through team collaboration, ensuring seamless performance, scalability, and problem-solving to overcome real-time processing challenges in security and access control applications.

Tech used: *AWS (S3, Lambda, Rekognition, SNS, CloudWatch), HTML, CSS*

PROJECTS

- **LinguaLink** [Demo Link](#)
A platform that connects users based on shared interests and complementary language goals — either by matching users learning the same language or pairing native speakers with learners. Integrated Stream (getStream.io) to enable real-time chat and video calling, fostering meaningful language exchange and social interaction. Focused on designing responsive design, user authentication, and dynamic matching algorithms.
Tech used: *MongoDB, ReactJS, ExpressJS, NodeJS, Tailwind CSS, Stream* — [GitHubLink](#)
- **MERNConnect** [Demo Link](#)
A full-stack real-time messaging application enabling users to send text and image messages seamlessly. Built using the MERN stack, with Socket.io handling real-time bidirectional communication. Features user authentication, a responsive UI, and media handling for smooth messaging. Designed to deliver a fast and interactive chat experience.
Tech used: *MongoDB, ReactJS, ExpressJS, NodeJS, Tailwind CSS, Socketio* — [GitHubLink](#)
- **Skrib**
A JavaFX-based note-taking application with gesture-based hands-free navigation. The UI is built using JavaFX, while Python (OpenCV + MediaPipe) powers gesture recognition with a Random Forest classifier for detecting hand gestures. Includes essential note-taking features with an integrated gesture control system for an intuitive user experience.
Tech used: *Java, Python, OpenCV, MediaPipe* — [GitHubLink](#)
